Biotechnology Products

Telic Company provides substrates for nanofabrication of microfluidic chip blanks (lab-on-a-chip blanks) for biomedical research. Currently our slides, wafers and microfluidic blanks are used for the nanofabrication of MEMS, Biochips and Microfluidic Devices.

We have the capabilities to coat imagable slides and substrates with:

- Gold
- Chrome
- Nickel
- Titanium
- Aluminum

Substrates we provide are: soda lime, borosilicate, quartz, silicon

Sizes available: Microscope size to 6"

Customization is available and additional imaging services are available please see our website or contact us for more details.
